

Dr. Dominik M. Krupke

Curriculum Vitae

Experience

- Jan. 2024 - present **Algorithm Engineering Consultant, Freelancer (Secondary)**, Hannover, Germany.
Consulting companies on how to solve difficult optimization problems in practice.
- Mar. 2022 - present **Postdoc-Researcher and Teacher, TU Braunschweig, IBR, Algorithms Group**
(Prof. Fekete), Braunschweig, Germany.
Researching and teaching how to solve NP-hard optimization problems in practice.
- Nov. 2022 - Jan. 2023 **Guest Researcher (3 Months)**, Tel Aviv University, CGL (Prof. Halperin), Tel Aviv, Israel.
- Nov. 2016 - Mar. 2022 **Researcher and Teaching Assistant, TU Braunschweig, IBR, Algorithms Group**
(Prof. Fekete), Braunschweig, Germany.

Education

- 2016-2022 **Dr. rer. nat.**, TU Braunschweig, Braunschweig, Germany, Grade "Summa Cum Laude".
Computer Science - Algorithms
- 2014-2016 **Master of Science**, TU Braunschweig, Braunschweig, Germany, Grade 1.0 "With Honors".
Computer Science
- 2011-2014 **Bachelor of Science**, TU Braunschweig, Braunschweig, Germany, Grade 1.2 "With Honors".
Computer Science

Dissertation

- Title *Algorithm Engineering for Hard Problems in Computational Geometry*
- Reviewer Prof. Sándor P. Fekete, Prof. William J. Cook, Prof. Joseph S.B. Mitchell
- Download https://krupke.cc/assets/pdf/dissertation_veroeffentlichung.pdf
- Description Many practically relevant problems in Computational Geometry are provably hard to solve. In this thesis, we consider a series of these problems and tackle them with various techniques, e.g., mixed integer programming, constraint programming, SAT-solvers, and even deep reinforcement learning. Additionally, we provide a number of results on complexity and (approximation) algorithms for these problems.

Skills

Technical Skills

Combinatorial Optimization: Proficient in solving NP-hard problems to optimality using techniques like Mixed Integer Programming, Constraint Programming, custom branch-and-bound algorithms, SAT-solvers, and Second Order Cone Programming.

Approximation and Meta-heuristics: Skilled in finding near-optimal solutions using meta-heuristic techniques and large neighborhood search methods.

Algorithmic Foundations: Strong background in theoretical computer science, with a comprehensive understanding of algorithmic concepts and their practical applications, such as complexity, approximation, and graph theory.

Programming and Performance Tuning: Adept in writing maintainable Python and C++ code for complex algorithms, with expertise in performance tuning and modularization. Examples available on my GitHub profile.

Data Analysis and Visualization: Capable of managing, evaluating, and quality-checking complex data, as well as visualizing data sets for insights and decision-making. Refer to my dissertation for exemplary empirical evaluations.

Machine Learning: Familiar with machine learning techniques and have applied them successfully in research projects. Eager to explore their potential to augment classical algorithms, although this is neither a primary focus nor an area of expertise.

Research Skills

Theory-Practice Bridge: Skillful in bridging the gap between theoretical computer science and practical implementation, highlighted by interdisciplinary collaborations and consultancy.

Interdisciplinary Collaboration: Extensive involvement in projects across diverse fields such as robotics, bioinformatics, automotive, and satellite management.

Creativity and Curiosity: Demonstrated curiosity and creativity in learning and combining new techniques, as evidenced by the diverse techniques used in my dissertation and the variety of projects undertaken.

Soft Skills

Teaching and Presentation: Proficient in teaching and presenting complex topics, as proven by the positive evaluation of my lecture on algorithm engineering and the popularity of my online material.

Project Management: Experienced in managing multiple projects and student teams concurrently, as evidenced by the number of successfully completed projects.

Awards and Achievements

- 2014 Disproved a conjecture of Erik D. Demaine, see https://erikdemaine.org/papers/BoundaryDetection_IROS2009/.
- 2014 Prize of the German Informatics Society (GI) for the outstanding undergraduate student in Computer Science.

- 2016 Solved Problem 53 of The Open Problems Project (<https://topp.openproblem.net/p53>)
- 2017 Prize of the German Informatics Society (GI) for the outstanding masters student in Computer Science.
- 2019 Best Paper Award at International Conference on Algorithms and Complexity (CIAC 2019)
- 2023 Best Paper Award at SIAM Symposium on Algorithm Engineering and Experiments (ALENEX 2023)

Projects

- CP-SAT Primer A primer on Google's OR-Tools CP-SAT solver I started for my students because the official documentation did not reveal enough details. It is still a work in progress, but already has over 200 stars and is one of the first results when googling for *CP-SAT*. <https://github.com/d-krupke/cpsat-primer>
- CP-SAT Log Analyzer Developed a web-app that helps to analyze and visualize the log files of CP-SAT runs and investigate performance issues. <https://cpsat-log-analyzer.streamlit.app/>
- ProvideQ/QuBRA Researcher on estimating the impact of quantum computing on combinatorial optimization problems. My primary task in these projects is to provide the baseline of what classical computers are already capable of.
- ASIMOV Partner for the algorithmic side in a project on satellite automation for the European Space Agency. https://www.esa.int/Enabling_Support/Preparing_for_the_Future/Discovery_and_Preparation/Going_going_gone!_Why_we_could_soon_be_using_auctions_to_download_satellite_data
- CG:SHOP Technical lead and co-organizer for a yearly challenge on solving hard optimization problems in computational geometry. Official part of the flagship conference SoCG. <https://cgshop.ibr.cs.tu-bs.de/>
- ROBUST Project on disease module mining using Steiner trees (bioinformatics).
- slurminade A Python-package that allows to distribute Python function calls on a Slurm cluster by a simple decorator. <https://github.com/d-krupke/slurminade>
- skbuild-conan A Python-package that allows to build Python packages with C++ extensions using Conan. <https://github.com/d-krupke/skbuild-conan>
- AlgBench A Python-package for data collection and management of algorithmic experiments. <https://github.com/d-krupke/AlgBench>
- CheckMyTex A small side project that originated from the need to find and fix errors and inconsistencies in my dissertation.
- ... See also <https://krupke.cc/projects/>

Programming Skills

Python Advanced knowledge, as indicated by my Python projects. Python is my go-to language for algorithmic prototyping, as it allows me to write complex code that is still readable with a few lines (especially mathematical programming). Aside from the great ecosystem (Pandas, NumPy, Matplotlib, ...), I also like that Python makes it easy to include other languages, allowing me to implement the performance critical parts in C++. With my tool *skbuild_conan*, I also made it comfortable to use C++ libraries in Python.

C++ I know how to write fast and efficient C++-code, and have experience with many compiler and optimization details. However, I only use C++ when I need its efficiency, as I find it too verbose and error-prone for most tasks.

Other Over the years, I have learned and used various other languages (Java, Ruby, C, Assembly, Javascript, ...) and I am generally open to learn new languages. For example, I consider Rust and Julia as promising languages for the future, but currently they miss libraries that are important for my work.

... *Also check my repositories on <https://github.com/d-krupke>.*

Teaching Experience

Lecturer Developed and taught a new course on algorithm engineering, created from the ground up, which received very positive evaluations from students. Additionally, designed and instructed a project-based course as an introduction to algorithm engineering over several semesters, engaging students in hands-on learning.

Teaching Assistant Assisted in providing tutorials and creating exercises for courses focused on mathematical optimization and approximation algorithms, enhancing students' understanding of these critical areas.

Programming Labs Supervised over 20 software development projects in teams of up to 12 students, gaining substantial experience in project management and programming education. My mentorship contributed to students winning the best project award (SEP) twice.

Thesis Supervision Guided more than 20 bachelor's and master's students through their theses on various algorithmic topics, facilitating their academic and research development.

Online Material Authored a primer on CP-SAT initially intended for the algorithm engineering class, which has since been well-received and utilized beyond the university setting.

Coding Competitions Served as co-organizer and technical lead for the CG:SHOP competitions, gaining experience in managing and directing coding competitions that inspire innovation and problem-solving skills among participants.

Further Information *For more details on my teaching activities, please refer to my teaching portfolio at <https://krupke.cc/teaching/>.*

Other

Program Committee I have been in the program committee of the SIAM Symposium on Algorithm Engineering and Experiments (ALENEX23).
